

THE INVENTION CLAIMED IS:

1. A portable table comprising:

a horizontal member and a single support member;

said horizontal member having a top surface, a bottom surface, a first end and a

5 second end;

said support member, having a fixed end and a free end, wherein said fixed end is attached to said horizontal member;

wherein when the table is in use, said support member is positioned generally perpendicularly to said horizontal member, a point of rotation is provided at said free end of
10 said support member, and the table is rotated about said point of rotation; and

said support member is positioned generally parallel to said horizontal member when said table is transported.

2. A portable table as defined in claim 1, further including a flexible strap having a first end and a second end,

15 wherein said first end of said flexible strap is attached proximate said first end of said horizontal member and said second end of said flexible strap is attached proximate said second end of said horizontal member; and

wherein when said table is in use, said flexible strap is placed behind a user of said portable table to support said portable table.

20 3. A portable table as defined in claim 1, wherein said portable table has a predetermined width and a predetermined depth and wherein the width of said horizontal member is no more than twenty inches and the depth of said horizontal member is no more than five and one half inches.

4. A portable table as defined in claim 1, further including clamps attached to said
25 bottom surface of said horizontal member for retaining said support member therein when

said table is transported.

5. A portable table as defined in claim 1, wherein said support member is threadedly attached to said horizontal member.

6. A portable table as defined in claim 1, where in said support member is comprised of a first section and a second section and wherein said first section is threadedly mated with said second section.

7. A portable table as defined in claim 1, wherein said support member includes means for lengthening or shortening to adjust the position of said horizontal member relative to the ground.

8. A portable table as defined in claim 1, further including an aperture through said horizontal member and a flexible member attached to said horizontal member and surrounding said aperture for supporting a beverage therein.

9. A portable table as defined in claim 1, further including an aperture through said horizontal member, a compartment attached to said bottom surface of said horizontal member, said aperture providing access to said compartment, and a lid hingedly attached to said horizontal member to restrain contents within said compartment.

10. A portable table as defined in claim 1, further including a compartment removably attached to said horizontal member.

11. A portable table to be transported by a user comprising:

a horizontal member and a only one post shaped support member;

said horizontal member including a first end and a second end;

said support member including a fixed end and a free end, wherein said fixed end of

5 said support member is attached to said horizontal member proximate the center thereof;

means for limiting movement of said horizontal member in a direction away from the

user;

wherein when said table is transported, said support member is positioned proximate
said horizontal member; and

10 wherein when said table is in use, said support member is positioned generally
perpendicular to said horizontal member, an axis of rotation is provided at said free end of
said support member, and the table is rotated about said axis of rotation.
